# SALE INFORMATION

## VENUE

Merlewood Angus, 880 Berrys Creek Road, Mirboo North 3871

## INSPECTION

Sale commences at 12:00pm on Friday 14 March 2025 with sale bulls being penned and available for viewing from 9:00am onwards on sale day. The bulls will be sold by open-cry auction with video footage of each sale bull displayed on large screens in the background.

If for some reason you missed us at our Beef Week Open Day and wish to inspect the bulls prior to our sale day, please feel free to call Anne Marie & Daniel on 0425 862 941 to arrange a private inspection. General queries welcome at all times.

## SAFETY

All our sale bulls have been screened for safety and are quiet to handle under normal circumstances. Please note that sale day is not a normal environment for cattle and as such we ask you to exercise caution and be alert of fighting bulls. Visitors enter pens at their own discretion. Children are prohibited from entering the bull pens at all times.

## AUCTIONS PLUS

The sale is interfaced with AuctionsPlus and will be conducted online in real time. If you cannot attend the sale you must register within 48 hours before the sale to bid. For further information or assistance with registration please contact Peter Rollason on 0419 600 323 or [peterrollason@elders.com.au](mailto:peterrollason@elders.com.au) or [auctionsplus.com.au](http://auctionsplus.com.au)

## HERD HEALTH

- All sale bulls have been vaccinated for Vibriosis.
- All sale bulls have been vaccinated for Pestivirus.
- All sale bulls have been 7in1 vaccinated.
- All sale bulls have been fertility tested and structurally assessed by Ian Moreleand of Studcare Genetics.
- All sale bulls are registered with Angus Australia.
- All sale bulls are sire verified using the ANGUS GS DNA testing.

## OUTSIDE AGENT REBATE

2% rebate will be paid to outside agents, introducing a buyer and settling within 7 days of sale date.

## GST

As is common industry practice, all bulls are sold GST exclusive.

## DELIVERY

Courtesy of Merlewood Angus free freight will be provided for distances within 150km of our property.

## INSURANCE

Please note that at the fall of the hammer the bull belongs to you. As such we strongly recommend that you take out insurance. Merlewood Angus recommend insuring all bulls for at least the first year of their working life.

## **BRINGING YOUR BULL HOME**

On arrival at their new home it is important a suitable mob of animals is yarded to greet the bull and minimize the stress on the bull. Suitable animals include pregnant cows, steers but certainly not other bulls.

We strongly urge breeders to rotate their bulls mid-season. No amount of vet checking, semen examination or paddock observation, will detect all cases of transient issues with bull semen. While it is rare, sometimes a bull looks to be doing everything right, but due to unknown stresses, as much as three months prior to the date of service, conception is not achieved. The greatest insurance against low conception is to replace, or swap bulls around, at least three weeks before the end of the joining period.

The bulls are in good joining condition at point of sale, but it is imperative to ensure good nutrition for the bulls during the joining period. You should check the bulls regularly to see they are working, especially in the early stages of joining when the majority of problems occur and early intervention can minimise the damage to the bull and to conception rates.

When joining is complete, bulls should be drenched and placed on good pasture to get back into first grade health without being allowed to get over fat.

## **SELLING AGENTS**

Nutrien Livestock and Elders are Merlewood Angus' selling agents.  
This year our auctioneer will be Ross Milne of Elders.

## **PRE & POST SALES SERVICE**

We believe that purchasing your bull first Merlewood Angus bull is only the start of the cattle conversation. We encourage open and honest communication at all times. We are here to answer all your breeding queries and assist you with choosing a bull each year for your commercial breeding program and as we get to know both you and your herd we can offer a more tailored-service.

For all your pre-sale queries contact Anne Marie & Daniel on 0425 862 941.

## **GUARANTEE**

Every bull is guaranteed to be a breeder at the time of sale and is guaranteed fertile for 12 months from sale day. If a bull should prove infertile or unable to serve cows naturally (provided it is not caused by injury or disease contracted post sale), the purchase price will be refunded or a credit given, equal to the purchase value of the bull less salvage value.

## **SEMEN RIGHTS**

Merlewood Angus retains the right to collect semen from all sale bulls for use within their own herd. In the event of the semen collection right being exercised, this will be at a time convenient to the owner and at Merlewood Angus' cost. In the event of the bull being on-sold, this right carries forward.

## **DISCLAIMER**

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue and the information, neither the vendors, selling agents or representatives there of assume any responsibility for the correctness, use or interpretation of this information on animals included herein.

# WELCOME

Dear Fellow Farmers

Another year passes as we sit down to write our welcome letter and say a warm hello with our words on the page. This last year has flown past in a whirlwind of farm daily activities. The constantly changing seasons and market movements have kept us, like all farmers, on our toes. To this end we have been concentrating on those areas of our farming business which we can influence the most.

~ And for stud and commercial beef breeders alike, that is investing in genetics!

Our well-balanced beefy bulls will all bring performance to your pedigree pool. Each individual bull will contribute to choice carcass cuts in their own unique way. No matter where you are on your breeding journey, there is a bull to enhance your program. Born in the Gippsland and bred for this eco-environment, our bulls not only withstand wet winters and steep terrain but pass these traits consistently onto their progeny. Temperament is a given and docility is ALWAYS our first selection criteria.

Our 9th annual autumn bull sale features sons of Banquet Quirky Q209, Boonaroo Keystone Q90, Merlewood Stellar R49 along with a smorgasbord of sought after AI sires including but not limited to Myers Fair N Square, Ellingson Rangeland and Connealy Guard Rail 923E.

Merlewood Stellar R49 is a true head turning sire producing, in our opinion, the crop of our calves. Banquet Quirky Q90 sons are peas in a pod; born small but with lots of hybrid vigour and consistently excelling on 200d and 400d weights. Boonaroo Keystone Q90 is all about infusing muscling and marbling into the meat.

More details on our feature sires can be found on our website and individual lot videos will be available from mid February on both our website and the AuctionsPlus online bidding platform.

Please feel free to reach out to any member of our team including our breeding consultant Willie Milne and our selling agents at both Elders and Nutrien AG who have supported us since our first bull sale and beyond.

As always, we look forward to warmly welcoming you all on Sale Day to our annual bull sale auction here on our farm. In the meantime, please do call or message us with any queries you may have.

With warmest wishes

Anne Marie & Daniel Barrow

# Understanding the TransTasman Angus Cattle Evaluation (TACE)

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease/Birth	<b>CEDir</b>	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>CEDtrs</b>	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>GL</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	<b>BW</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	<b>200 Day</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	<b>400 Day</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	<b>600 Day</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Maternal	<b>MCH</b>	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
	<b>MBC</b>	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
	<b>MCW</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	<b>DtC</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	<b>SS</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	<b>CWT</b>	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	<b>EMA</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	<b>P8 Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	<b>RBV</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	<b>IMF</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	<b>NFI-F</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	<b>Doc</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	<b>Claw Set</b>	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
	<b>Foot Angle</b>	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
	<b>Leg Angle</b>	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.
Selection Index	<b>\$A</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	<b>\$A-L</b>	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Selection Indexes

<b>\$D</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
<b>\$D-L</b>	\$	<p>The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.</p> <p>While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.</p>	Higher selection indexes indicate greater profitability.
<b>\$GN</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
<b>\$GN-L</b>	\$	<p>The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.</p> <p>While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.</p>	Higher selection indexes indicate greater profitability.
<b>\$GS</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
<b>\$GS-L</b>	\$	<p>The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.</p> <p>While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.</p>	Higher selection indexes indicate greater profitability.
<b>\$PRO</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
<b>\$T</b>	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

# Angus Australia Disclaimer and Privacy Information

## Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

## Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

- PV: both parents have been verified by DNA.
- SV: the sire has been verified by DNA.
- DV: the dam has been verified by DNA.
- #: DNA verification has not been conducted.
- E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

## Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

## Buyers option to opt out of disclosing personal information to Angus Australia

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents \_\_\_\_\_

from member \_\_\_\_\_ (name) do not consent to Angus Australia using my name address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Authorised Name: \_\_\_\_\_ Signature: \_\_\_\_\_

Date: \_\_\_\_\_

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350
